LITTLE BEAVER'S TOWABLE UNIT DRAWS RAVE REVIEWS AT TRADE SHOWS

(Livingston, TX - March 24, 2003) - Little Beaver's newest hydraulic earth drill is a towable model, making it ideal for sign installers, rental dealers and contractors who require a powerful but highly portable machine. Featuring an 11HP Honda engine and a 6 gpm hydraulic system, this new model drills holes up to 16" in diameter and is the most powerful towable earth drill on the market today.

A removable tow bar is standard equipment and takes only seconds to install or remove. Once at the job site, an infinitely variable 20 degree auger tilt allows vertical drilling in uneven terrain. Easy rolling turf tires allow the machine to be maneuvered into position without damaging the turf. Forward and reverse controls provide one person operation while a two-position handle permits drilling right next to buildings or other structures.

"We've shown the towable unit at several recent trade shows and the customer response has been extremely positive," states Mike Hale, Little Beaver's National Sales Manager. "Based on this response, we expect the towable unit to be one of our most successful new product launches."

Located in Livingston, Texas, Little Beaver is a leading manufacturer of one-man earth drills and augers. Most models feature the patented torque tube, which makes one-man digging a fast, easy and safe operation. Little Beaver also manufactures the Kwik-Trench line of earth saws. For more information about Little Beaver's complete line of earth drills, augers and trenchers, call 800-227-7515 or visit their website at www.littlebeaver.com.
