

HORIZONTAL BORING KITS

Little Beaver makes two types of horizontal boring kits that turn your Little Beaver earth drill into a powerful and cost effective horizontal boring machine.

Sidewalk Auger Kit

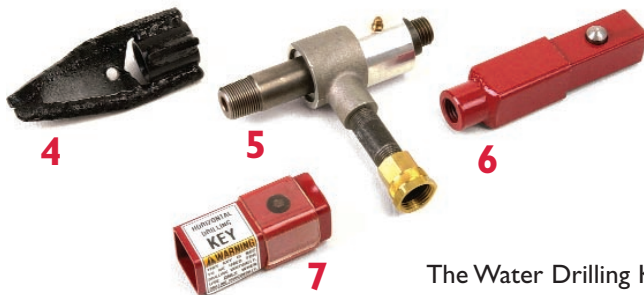

The Sidewalk Auger Kit uses a 3" diameter auger and wiggle joint extension to quickly bore under sidewalks up to 5' long. Since the torque tube is not used with this kit, a horizontal drill key is included to bypass the engine kill switch.

Drill Bit Size: 3"

1. 3" x 5' sidewalk auger
2. 2" x 5' wiggle joint extension
3. Horizontal drill key

Water Drilling Kit

The Water Drilling Kit is used for horizontal boring under driveways or parking lots up to a distance of 50'. The water drilling kit consists of a water drill bit, swivel adaptor, swivel assembly, and a horizontal drill key. To complete the kit, you will need a garden hose, 3/4" Schedule 80 water pipe, and 3/4" pipe collars. Once the kit has been assembled and starter trenches have been dug, boring can begin. Water from your garden hose or pump runs through the water swivel, water pipe and out the end of the drill bit, flushing the cuttings from the bore hole.

Drill Bit Sizes: 2" 3" 4"

4. Water drill bit (2", 3" or 4")
5. Water swivel assembly
6. Water swivel adaptor
7. Horizontal drill key

Drill Chuck Attachment

Convert any Little Beaver earth drill into a powerful wood or concrete drill with an efficient drill chuck attachment. The 3/4" capacity chuck accommodates standard wood or masonry bits up to 1.5" in diameter and drills clean holes in fence posts, wooden decking, concrete and masonry.
