# ANCHORING ADAPTERS

## ANCHORING ADAPTERS

**Little Beaver Anchoing Adapters connect with a Hydraulic Earth Drill to quickly drive tent stakes, anchor mobile homes or install utility anchors.**

These adapters pair with a Little Beaver Hydraulic Earth Drill with an anchor drive handle. They are intended for operation at 60 rpm only.

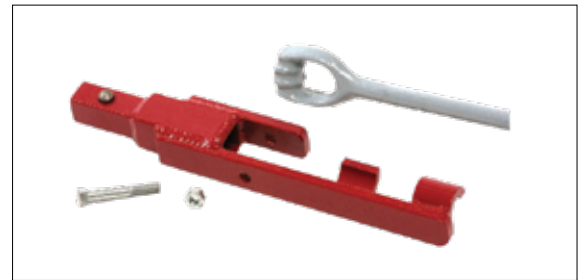

### Ideal applications:

- Utility Anchoring
- Mobile Home Anchoring
- Driving Tent Stakes

## UTILITY ANCHORS

Drive utility anchors with this special adapter that makes one-man utility anchor installation possible. The Utility Anchoring Adapter is a safer, more efficient alternative to anchor cranks and hand setting. Use with a high-torque anchor handle.

- Installs a utility anchor in less than two minutes.
- Quickly penetrates most soil types.

## MOBILE HOME ANCHORS

Secure mobile homes to a foundation with ground anchors using this convenient mobile home anchor adapter. The Mobile Home Anchoring Kit is less expensive, faster and more user friendly than using a pipe thread machine. Use with a standard anchor handle.

- Ties down an entire mobile home in as little as 30 minutes.
- Efficiently drives anchors through most soils.

## TENT STAKES

The Tent Stake Driver makes for rapid tent setup. When the party's over, the convenient reverse drive feature of Hydraulic Earth Drills also allows for quick tent stake removal. Use with a standard anchor handle.

- Quickly drives tent stakes for fast installation.
- Reverse feature quickly removes stakes.
